SOFTWARE DEVELOPMENT PROJECTS

StopJockin - Online platform for New Orleans Business owner   Jan 2022 - PRESENT
- Utilized MERN stack (MongoDB, Express, React.js, Node.js) to build a full stack application. Applied full create, read, update, delete (CRUD) operations hitting all RESTful API calls.
- Created application with mobile-first approach and styled using Styled-Components and CSS3 with flexbox layouts.
- Used Payload CMS to handle data management and admin authentication.

gameQ - Search and find videogames to create lists for twitch livestreaming recommendations.   Dec 2022- PRESENT
- Used Mongoose to define schemas for MongoDB collections.
- Implemented ES6 tagged template literals with Styled-Components along CSS and Bootstrap for styling.

engineRepo - Exotic vehicle gallery   Nov 2022 - PRESENT
- Wireframed and planned UI design of application.
- Utilized Git control during the production of the application with frequent commits until deployment.
- Tested API routes using Postman to ensure functionality during production.
- Implemented Javascript methods and functions in order to utilize an Express, MongoDB, and Node.js backend creating a representational state transfer(REST)ful application program interface(API).
